

# Universal Stanchion

## Flexible. Affordable. Built to Outlast.

The Universal Stanchion is designed for reliable performance in demanding dock environments and is commonly used with vertical dock levelers for off-wall control mounting. With replaceable components, configurable widths, and smaller shipping volume, it offers a smarter, more cost-effective option than traditional welded stanchions.

### FEATURES

#### Replaceable Components

Accidents happen — and repairs shouldn't be expensive. Every major part can be easily replaced if damaged, extending the life of your stanchion and reducing maintenance costs.

#### More Affordable Than Welded Designs

A non-welded construction reduces manufacturing and repair expenses, delivering a high-value solution without compromising durability.

#### Reduced Shipping Costs

Because units ship unassembled, freight expenses are significantly lower than bulkier welded stanchions.

#### 2x4 or 4x4 Upright Options

Choose the upright size that best fits your space, traffic flow, and protection requirements.

#### Configurable Widths

Widths can be customized to align with your dock positions or facility layout, ensuring a perfect fit for your operation.

#### Standard Front Panel Included

Each stanchion comes equipped with a front panel that provides added protection for internal wiring and mounted components — enhancing both safety and longevity.

## CONSTRUCTION

### 2x4 or 4x4 steel uprights

Constructed from 3/16" thick-wall steel tubing for long-lasting durability

### Welded to pit steel

Main uprights are securely welded to the pit steel, ensuring a strong, stable installation.

## ACCESSORIES

One universal bracket that fits every dock light we offer.

## UNIVERSAL STANCHION COMMON OPTIONS

2x4 Uprights (34" Width, 64" Width)

4x4 Uprights (38" Width, 68" Width)

34" Width (single Control Box)

38" Width (single CB)

64" Width (dual CB)

68" Width (dual CB)
