Recognize Precautionary Information

Safety-Alert Symbol

The Safety-Alert Symbol is a graphic representation intended to convey a safety message without the use of words. When you see this symbol, be alert to the possibility of death or serious injury. Follow the instructions in the safety message panel.

General Operational Precautions

Read and understand the Owner’s/User’s Manual and become thoroughly familiar with the equipment and its controls before operating the dock leveler.

Never operate a dock leveler while a safety device or guard is removed or disconnected.

Never remove DANGER, WARNING, or CAUTION signs, Placards or Decals on the equipment unless replacing them.

| Operating Zone |
| Operating Zone |

Figure 1

Do not start the equipment until all unauthorized personnel in the area have been warned and have moved outside the operating zone (see Figure 1).

Remove any tools or foreign objects from the operating zone before starting.

Keep the operating zone free of obstacles that could cause a person to trip or fall.

WARNING: This product can expose you to chemicals including lead, which are known to the State of California to cause cancer or birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov
**PRECAUTIONS**

**Operational Precautions**

Learn the safe way to operate this equipment. Read and understand the manufacturer’s instructions. If you have any questions, ask your supervisor.

**DANGER**

Stay clear of dock leveling device when transport vehicle is entering or leaving area.

Do not move or use the dock leveling device if anyone is under or in front of it.

Keep hands and feet clear of pinch points. Avoid putting any part of your body near moving parts.

**WARNING**

Chock/restrain all transport vehicles. Never remove the wheel chocks or release the restraining device until loading or unloading is finished, and transport driver has been given permission to drive away.

Do not use a broken or damaged dock leveling device or restraining device. Make sure proper service and maintenance procedures have been performed before using.

Make sure lip overlaps onto transport vehicle bed at least 4 in. (102 mm).

Keep a safe distance from both side edges.
Operational Precautions

**WARNING**

Do not use dock leveling device if transport vehicle is too high or too low.

Do not overload the dock leveling device.

Do not operate any equipment while under the influence of alcohol or drugs.

Do not leave equipment or material unattended on dock leveling device.

**PRECAUTIONS**

**OPERATING INSTRUCTIONS**

**MECHANICAL DOCK LEVELERS**

**NORMAL OPERATION**

1. Raise the platform by pulling and holding the platform release ring.

2. Hold the platform release ring until the lip is fully extended, then release the platform release ring. Walk out onto the platform. The platform will lower until lip is resting on the transport vehicle.

**STORING LEVELER**

1. Pull the platform release ring. Slowly walk the platform down allowing enough time for the lip to fold, clearing the transport vehicle. Once lip clears transport vehicle, continue to walk leveler to the cross-traffic position.

**BELOW DOCK ENDOLOADING**

- Pull and hold the platform release ring until the platform is at the fully-raised position. Slowly walk the platform down allowing enough time for the lip to fold. Just before the platform reaches the cross-traffic position, pull and hold the safety leg retract pull ring located in a recess at front of the platform. The platform will continue lowering to the full below dock position.

**DANGER**

- Always chock transport vehicle wheels or engage vehicle restraint and set parking brakes before operating dock leveler or beginning to load or unload.

- Before activating dock leveler, check to make sure the transport vehicle is positioned squarely against dock bumpers. Ensure lip will avoid contact with transport vehicle frame, sides and cargo during dock leveler activation. If contact is likely or observed, reposition transport vehicle.

- Ensure the transport vehicle floor supports extended lip or the leveler frame (lip keepers or below dock endload supports) supports the ramp before driving on ramp.

- Stay clear of hinges and front and sides of moving dock leveler.

- Never use hands or equipment to move the ramp or lip.

- Never use damaged or malfunctioning dock leveler. Report problems immediately to supervisor.

- Always store dock leveler and remove people, material, and equipment from ramp before vehicle leaves the dock.

- DO NOT ENTER PIT unless dock leveler is securely supported and proper lockout/tagout procedures have been completed. See “Maintenance Precautions” in Owner’s/User’s Manual.

**FAILURE TO FOLLOW THESE INSTRUCTIONS WILL RESULT IN DEATH OR OTHER SERIOUS INJURY.**

1751-0875 Rev D
OWNER’S/USER’S RESPONSIBILITIES

1) The manufacturer shall provide to the initial purchaser and make the following information readily available to the owners/users and their agents, all necessary information regarding Safety Information, Operation, Installation and Safety Precautions, Recommended Initial and Periodic Inspections Procedures, Planned Maintenance Schedule, Product Specifications, Troubleshooting Guide, Parts Break Down, Warranty Information, and Manufacturers Contact Information, as well as tables to identify the grade(slope) for all variations of length or configuration of the dock leveling device and information identifying the maximum uncontrolled drop encountered when sudden removal of support while in the working range of the equipment.

2) When selecting loading dock safety equipment, it is important to consider not only present requirements but also future plans and any possible adverse conditions, environmental factors or usage. The owners/users shall provide application information to the manufacturer to receive recommendations on appropriate equipment specifications and capacity.

3) The owner/user must see all nameplates, placards, decals, instructions and posted warnings are in place and legible and shall not be obscured from the view of the operator or maintenance personnel for whom such warnings are intended for. Contact manufacturer for any replacements.

4) Dock leveling devices may become hazardous if the manufacturer’s instructions regarding modifications or adjustments are not followed. Modifications or alterations of dock leveling devices shall only be made with prior written approval from the original manufacturer. These changes shall be in conformance with all applicable provisions of the MH30.1 standard and shall also satisfy all safety recommendations of the original equipment manufacturer of the particular application.

5) The owner/user should recognize the inherent dangers of the interface between the loading dock and the transport vehicle. The owner/user should, therefore, train and instruct all operators in the safe operation and use of the loading dock equipment in accordance with manufacturer’s recommendations and industry standards. Effective operator training should also focus on the owner’s/user’s company policies, operating conditions and the manufacturer’s specific instructions provided with the dock leveling device. Maintaining, updating and retraining all operators on safe working habits and operation of the equipment, regardless of previous experience, should be done on a regular basis and should include an understanding and familiarity with all functions of the equipment. Owners/users shall actively maintain, update and retrain all operators on safe working habits and operations of the equipment.

6) An operator training program should consist of, but not necessarily be limited to, the following:

   a) Select the operator carefully. Consider the physical qualifications, job attitude and aptitude.

   b) Assure that the operator reads and fully understands the complete manufacturer’s owners/users manual.

   c) Emphasize the impact of proper operation upon the operator, other personnel, material being handled, and equipment. Cite all rules and why they are formulated.

   d) Describe the basic fundamentals of the dock leveling device and components design as related to safety, e.g., mechanical limitation, stability, functionality, etc.

   e) Introduce the equipment. Show the control locations and demonstrate its functions. Explain how they work when used properly and maintained as well as problems when they are used improperly.

   f) Assure that the operator understands the capacity rating, nameplate data, placards and all precautionary information appearing on the dock leveling device.

   g) Supervise operator practice of equipment.

   h) Develop and administer written and practical performance tests. Evaluate progress during and at completion of the course.

   i) Administer periodic refresher courses. These may be condensed versions of the primary course and include on-the-job operator evaluation.
7) Loading dock safety equipment should never be used outside of its vertical working range, or outside the manufacturer’s rated capacity. It shall also be compatible with the loading equipment and other conditions related to dock activity. Please consult the manufacturer if you have any questions as to the use, vertical working range or capacity of the equipment. Only properly trained and authorized personnel should operate the equipment.

8) It is recommended that the transport vehicle is positioned as close as practical to the dock leveling device and in contact with both bumpers. When an industrial vehicle is driven on or off a transport vehicle during loading and unloading operations, the transport vehicle parking brakes shall be applied and wheel chocks or a restraining device that provides equal or better protection of wheel chocks shall be engaged. Also, whenever possible, air-ride suspension systems should have the air exhausted prior to performing said loading and unloading operations.

9) When goods are transferred between the loading dock and a trailer resting on its support legs/landing gear instead of a tractor fifth wheel or converter dolly, it is recommended that an adequate stabilizing device or devices shall be utilized at the front of the trailer.

10) In order to be entitled to the benefits of the standard product warranty, the dock safety equipment must have been properly installed, maintained and operated in accordance with all manufacturer’s recommendations and/or specified design parameters and not otherwise have been subject to abuse, misuse, misapplication, acts of nature, overloading, unauthorized repair or modification, application in a corrosive environment or lack of maintenance. Periodic lubrication, adjustment and inspection in accordance with all manufacturers’ recommendations are the sole responsibility of the owner/user.

11) Manufacturer’s recommended maintenance and inspection of all dock leveling devices shall be performed in conformance with the following practices: A planned maintenance schedule program must be followed, only trained and authorized personnel shall be permitted to maintain, repair, adjust and inspect dock leveling devices, and only the use of original equipment manufacturer parts, manuals, maintenance instructions, labels, decals and placards or their equivalent. Written documentation of maintenance, replacement parts or damage should be kept. In the event of damage, notification to the manufacturer is required.

12) Loading dock devices that are structurally damaged or have experienced a sudden loss of support while under load, such as might occur when a transport vehicle is pulled out from under the dock leveling device, shall be removed from service, inspected by a manufacturer’s authorized representative, and repaired or replaced as needed or recommended by the manufacturer before being placed back in service.
This manual provides current information on the LMP-series dock leveler. Due to ongoing product improvement, some parts may have changed, along with operation and troubleshooting methods. This manual describes these changes where applicable.

The LMP series incorporates the manufacturing efficiency of the "Lug Hinge" deck design with standard box construction to produce a reliable, economic mechanical dock leveler.

Each LMP-series dock leveler has been factory tested to ensure satisfactory operation.

LMP dock levelers are available in the following sizes, weight capacities, and options:

<table>
<thead>
<tr>
<th>Width</th>
<th>6 ft (1829 mm)</th>
</tr>
</thead>
<tbody>
<tr>

* CIR (Comparative Industry Rating)

Call Poweramp to discuss available options to meet your specific needs.
Component Identification

Inspect package and all components. Report any missing or damaged items immediately and note on the shipping Bill Of Lading (BOL).
Installation Precautions

**DANGER**

It is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

**WARNING**

Post safety warnings and barricade the work area at dock level and ground level to prevent unauthorized use of the dock leveler before installation has been completed.

**WARNING**

DO NOT grind or weld if hydraulic fluid or other flammable liquid is present on the surface to be ground or welded.

DO NOT grind or weld if uncontained hydraulic fluid or other flammable liquid is present. Stray sparks can ignite spills or leaks near the work area. Always clean up the oil leaks and spills before proceeding with grinding or welding.

Always keep a fire extinguisher of the proper type nearby when grinding or welding.

**WARNING**

A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

**CAUTION**

Only trained installation professionals with the proper equipment should install this product.
INSTALLATION

Prepare Pit

Before lowering the dock leveler into the pit, the following must be performed:

1. Remove all debris from the pit and sweep the pit clean.

2. Check the entire dock leveler pit for proper construction according to approved/certified pit drawings. Make sure pit is square by making the following measurements (see Figure 5):

   - Measure pit width distance (A) at both front and rear of pit.
   - Measure dock floor-to-pit floor distance (B) at all four corners.
   - Measure pit length distance (C) at both sides.
   - Measure corner-to-corner (diagonal) distance (D) at both sides. Take measurements at dock floor level and at pit floor level.

If any measurement is off by more than 1/8 in. (3.2 mm), contact Systems Inc. Technical Services before proceeding.
Prepare Dock Leveler

Poweramp dock levelers are shipped with lifting brackets (A) fastened to the platform side joists, and shipping bands (B) around the platform lip and leveler frame (see Figure 6).

1. Remove any bumpers and/or control panels that may be banded to the frame of the dock leveler.

**NOTICE**

DO NOT remove the shipping bands (B) around the platform lip and leveler frame at this time. The shipping bands are needed to hold the leveler together during the installation process.

**Note:** Overall width of platform and lifting brackets (A) must be kept to a minimum to prevent interference between the lifting brackets and the pit walls as the dock leveler is lowered into the pit.

2. Make sure the mounting hardware of lifting brackets (A) is snug. The brackets should pivot without binding on the mounting cap screw.

**NOTICE**

DO NOT over-tighten the lifting bracket hardware. Over-tightening can damage the weather seal, if equipped.

3. Attach lifting chains to lifting brackets (A) and to a lifting device (i.e., hoist or fork truck) having the appropriate lifting capacity and reach.

4. Remove wood blocks that are attached to the leveler frame before putting the dock leveler into the pit.

INSTALLATION

Install Dock Leveler

DRAWN BY CHECKED BY

BDK 7/18/2018
Install Dock Leveler (continued)

**Note:** Poweramp dock levelers are designed with a nominal 1/2” (12.7 mm) shimming distance to allow for pit inconsistencies.

1. Determine height of shim stack (M) for each shim location (B) by performing the following:
   
   a. Measure leveler frame height distance (A).
   
   b. Measure dock floor-to-pit floor distance (K) at each shim location (B). Write down the dimensions obtained at each location.
   
   c. Subtract distance (A) from distance (K) to obtain the shim height. Repeat for each shim location.

2. Using the results obtained in step 1, create the individual shim stacks on the pit floor at location (B). Build each shim stack (M) with the top shim having a minimum size of 4-1/2” x 4-1/2” (114.3 mm x 114.3 mm) and each successive lower shim being larger so the shims can be welded together using a fillet weld. If using offset method, make sure load is over center of shim stack, NOT over the edge. DO NOT use straight method. See Figure 10.

![Shim Stacking Methods](image)

**Figure 10**

**Note:** A 1/4” (6.4 mm) thick shim at locations (C and D) are used only as a starting point. The final shim stack height will be determined after dock leveler is lowered into the pit.

3. Verify that each shim stack is at the correct height by measuring distance (L) [top of shim stack (M) to dock floor]. Distance (L) must equal the dock leveler height (A).

4. Put a 1/4 in. (6.4 mm) thick shim at locations (C and D).

5. Using an appropriate lifting device connected to the lifting brackets, lower dock leveler into the pit so rear hinge frame angle (H) is tight against rear pit curb angle (F) across full width of the leveler frame.

6. Allow rear of dock leveler to rest on the rear shims while keeping the front of the dock leveler level with the dock floor.

7. Add shims at front shim locations (C and D) so front of dock leveler will stay level with dock floor when leveler is resting fully on shims.

---

**NOTICE**

The minimum size of the shim that contacts the leveler frame (i.e. the top shim of each shim stack) must be at least 4-1/2” x 4-1/2” (114.3 mm x 114.3 mm) to support the full width of the frame rail and to provide a shelf for a fillet weld.

Use the thickest shim stock possible for stability and weld penetration purposes. DO NOT use multiple layers of 1/8 in. (3.2 mm) or thinner shim stock.

**Note:** To assist in obtaining an accurate measurement of distance (L), use a string (G) pulled tight across the pit opening, directly over the shim locations.

**WARNING**

The dock leveler is heavy. Use a lifting device and chains with the appropriate lifting capacity and reach.

Always use the lifting brackets provided with the unit whenever lowering or lifting a dock leveler into or out of a pit.

6. Allow rear of dock leveler to rest on the rear shims while keeping the front of the dock leveler level with the dock floor.

7. Add shims at front shim locations (C and D) so front of dock leveler will stay level with dock floor when leveler is resting fully on shims.
1. With rear hinge frame angle (F) tight against rear pit curb angle (G), perform/check the following:

- Pry between the platform and rear hinge frame angle at locations (E) to make sure rear edge of platform is parallel to the rear hinge frame angle (F).

- Gap (D) must exist equally along both sides of leveler so weather seal (if equipped) will not bind during dock leveler operation.

2. If gap (D) cannot be obtained equally at both sides of leveler, grind or add material at the rear edge of rear hinge frame angle (F) as needed.

3. Allow the dock leveler to rest fully on the shim stacks. Check that a smooth and level transition exists between the dock floor and the dock leveler platform. Add or remove shims as necessary until a smooth transition is obtained.

4. If leveler cannot be squared and/or made level as instructed in steps 8-10, contact Systems Inc. Technical Services.
Install Dock Leveler (continued)

**NOTICE**

DO NOT weld continuously along the full length of the rear hinge frame angle. This can put unnecessary stress on the leveler components, causing the leveler to malfunction and shorten the lifespan of the affected components.

5. With the rear hinge frame angle (F) tight against the rear pit curb angle (G), weld the rear hinge frame angle (F) to the rear pit curb angle (G) using a 3/8 in. (9.5 mm) flare bevel skip weld — each weld being 6 in. (152 mm) long.

• Start at each end with a 6 in. (152 mm) long weld. Space all the other welds out evenly, leaving approximately 6 in. (152 mm) space between each weld.

**Note:** Figure 11 shows a typical weld pattern. The weld pattern will vary slightly depending on size of dock leveler.

6. Prior to welding front of frame to curb steel, remove the shipping bands from around lip and leveler frame. Operate leveler through full cycle 4-6 times and walk the platform into stored position.

7. Allow platform and lip to float out of lip keepers, and shim under front of frame as required to level top of platform with dock floor.

8. Weld front of dock leveler frame (B) to shims located under the keepers, then weld the shims to the front pit curb steel.

9. Disconnect lifting device and chains from the lifting brackets.

10. Pull and hold the release ring (located in recess at rear of platform) until the platform is fully raised. Check for binding as platform rises.

11. Slowly walk out onto the platform to lower the platform. Allow the platform to lower to the cross-traffic position. Check for binding as platform lowers.

12. If binding occurs, reposition leveler and/or add or remove shims as necessary. Raise and lower platform again. If platform still binds, contact Technical Services for further instructions.

13. Check that the leveler is flush with the dock floor and that the platform lip contacts both lip keepers evenly.
1. Pull the release ring to raise the platform. Engage lip maintenance prop.

2. Shim and weld the maintenance prop (Figure 12):
   a. Install shims under maintenance prop (B) where prop attaches to leveler frame. Make sure prop is solidly shimmed.
   b. Raise maintenance prop (B) to the service (upright) position and lock prop in this position using an OSHA approved locking device.
   c. Proceed to step 23.

3. Install shims under lift arm (C, Figure 12) at locations using an acceptable shimming method (see Figure 13). The lift arm pivot must be solidly shimmed the entire length of the lift arm pivot. Make sure the lift arm pivot is level from side-to-side.

4. Finish weld all shims using a fillet weld:
   - Weld all shims within each shim stack to each other, then weld the shim stack to the leveler frame.
   - Weld the front leveler frame shim stacks to the front pit curb steel.

**WARNING**

DO NOT use the maintenance prop to support the raised platform until the maintenance prop has been properly shimmed and welded. The shims must be welded to each other, and also to the leveler frame.

**WARNING**

Make sure the platform is properly supported in the raised position before entering the pit to finish weld the shims.

5. Remove the lifting brackets from the platform side joists.

6. Disengage the platform maintenance prop.
Install Dock Leveler (continued)

7. Slowly walk out onto the platform to lower the platform until it is at the cross-traffic (stored) position.

8. Check operation of dock leveler by cycling the leveler at least four times:
   • When the platform is at full height, lip will be fully extended.
   • Lip will begin to drop after the unit begins to lower to truck bed.

9. Check below-dock position by walking platform down before lip folds completely:
   • Lip will be over lip keepers.
   • Platform safety legs will be resting on frame.

10. Check full below-dock position by walking the platform down. Pull and hold safety leg chain (A) before lip folds completely.

Note: If the lip does not extend fully or lip folds too quickly, see appropriate symptom in the Troubleshooting section.

11. When all welding has been completed, paint all the welds and shims.

12. Install the dock bumpers as required.

13. Install placard (see page 20).
Placard Installation Instructions

• Owner/Users are responsible for the installation and placement of product placards.

• Make sure placard is in plain view of dock leveler and/or vehicle restraint operations.

• Suggested placement of placard is near control box attached to electrical conduit by using nylon cable tie. If there is no control box present, mount placard on wall to the immediate left of leveler at eye level.

Figure 14

A - Control Box  B - Placard  C - Nylon Cable Tie  D - Conduit

(Placard placement shown as example only.)
Operational Precautions

**DANGER**
Stay clear of dock leveler and vehicle restraint when transport vehicle is entering or leaving dock area.

DO NOT move or use the dock leveler or restraint if anyone is under or in front of leveler.

Keep hands and feet clear of pinch points. Avoid putting any part of your body near moving parts.

**WARNING**
Only trained personnel should operate the dock leveler.

DO NOT use a broken or damaged dock leveler. Make sure proper service and maintenance procedures have been performed on leveler before using.

Transport vehicle wheels must be chocked unless a vehicle restraint is used. Never remove the wheel chocks until loading/unloading is finished and transport driver has been given permission to leave.

Make sure platform lip rests on the transport vehicle bed with at least 4 in. (102 mm) of overlap.

Maintain a safe distance from side edges of leveler during the loading/unloading process.

**NOTICE**
When activating the leveler, always pull swiftly AND hold the platform release ring until the platform is at the full raised position. Releasing the ring while the platform is still raising may result in damage to the equipment.

The LMP mechanical dock leveler is designed to compensate for a maximum ±12 in.* (305 mm) of height difference between the loading dock and the transport vehicle’s bed. DO NOT use the dock leveler if the transport vehicle’s bed is more than 12 in. (305 mm) higher or lower than the dock floor.

*Service height may vary with design specifications.

DO NOT overload the dock leveler.

DO NOT operate any equipment while under the influence of alcohol or drugs.

DO NOT leave equipment or material unattended on the dock leveler.
OPERATION

Operating Instructions
Ramp Loading/Unloading

1. Before activating dock leveler, check to make sure the transport vehicle is positioned squarely against dock bumpers. Ensure lip will avoid contact with transport vehicle frame, sides and cargo during dock leveler activation. If contact is likely or observed, reposition transport vehicle.

2. Instruct driver to remain at the dock until the loading or unloading process has been completed.

3. Chock the transport vehicle wheels, or use a vehicle restraint if available.

4. Raise the platform by pulling and holding the platform release ring (A).

5. Hold the release ring until the platform is at the fully-raised position and lip is fully extended.

6. Walk out onto the platform. The platform will lower until the lip rests on the transport vehicle bed.

7. Make sure that the lip is fully extended and supported on the transport vehicle along the entire width of the platform with at least 4 in. (102 mm) of lip contacting the transport vehicle bed.

8. Proceed with loading or unloading the transport vehicle.

9. When the loading or unloading process has been completed, return platform to cross-traffic (stored) position as follows:
   a. Raise the platform to the full-raised position by pulling and holding the platform release ring (A).
   b. Lower platform by slowly walking out onto the platform allowing time for the lip to fully fold and clear the transport vehicle. Continue walking out on platform until platform lowers to the cross-traffic position (lip engages in the lip keepers).

10. Remove chocks from transport vehicle wheels, or release the vehicle restraint if used.

11. Indicate to driver that the transport vehicle may leave the dock.
Operating Instructions (continued)

End Loading/Unloading

1. Before activating dock leveler, check to make sure the transport vehicle is positioned squarely against dock bumpers. Ensure lip will avoid contact with transport vehicle frame, sides and cargo during dock leveler activation. If contact is likely or observed, reposition transport vehicle.

2. Instruct driver to remain at the dock until the loading or unloading process has been completed.

3. Chock the transport vehicle wheels, or use a vehicle restraint if available.

4. If transport vehicle bed is at or above dock floor level, leave leveler at the cross-traffic position and proceed with loading or unloading. If transport vehicle bed is below the dock level, continue with Step 5.

5. Pull and hold the platform release ring (A) until the platform is at the fully-raised position.

6. Slowly walk the platform down allowing enough time for the lip to fold. Just before the platform reaches the cross-traffic position, pull and hold the safety leg retract pull ring (B, located in a recess at front of the platform). The platform will continue lowering to the full below dock position.

7. Proceed with loading or unloading. **Note:** When end unloading is finished and access to the rest of the transport vehicle is still required, the platform lip will need to be extended. See Ramp Loading/Unloading Instructions on page 22 for further instructions.

8. When loading or unloading is finished, raise the platform to the full-raised position by pulling and holding the platform release ring. Slowly walk the platform down, allowing enough time for the lip to fold. The platform will lower to the cross-traffic position (lip engages in the lip keepers).

9. Remove chocks from transport vehicle wheels, or release the vehicle restraint if used.

10. Indicate to driver that the transport vehicle may leave the dock.
Whenever maintenance is to be performed under the dock leveler platform, support the platform with maintenance prop (B). Position the maintenance prop behind front header plate (D) while staying clear of the lip. Lock the maintenance prop in the service (upright) position using an OSHA approved lockout device* (F) and tag out device* (G). See Figures 22 and 23.

Only the person servicing the equipment should have the capability to remove the lockout devices. The tag out devices* must inform that repairs are in process and clearly state who is responsible for the lockout condition.

* Refer to OSHA regulations 1910.146. Confined Space and 1910.147. Lockout/Tagout
Periodic Maintenance

Weekly Maintenance

- Operate the dock leveler through the complete operating cycle to maintain lubrication.

**Note:** To thoroughly inspect the platform hinge area, put the platform in the full below-dock position.

- Inspect the platform hinge and the lip hinge areas. The hinge areas must be kept free of dirt and debris. Build-up of foreign material in the hinge areas will cause abnormal operation.

- Inspect warning decals and placards. Replace if damaged or missing.

Quarterly Maintenance

- Complete Weekly Maintenance.

- Inspect the following for damage/abnormal wear:
  - Check welds for cracks.
  - Lift arm pins and mounting holes.
  - Lip hinge pins and rear hinge pins.
  - Check toe guards for free movement.
  - Bumpers for more than 1" of wear. Replace worn, loose, damaged or missing bumpers.
  - Side and rear weather seals.

- **Lubricate the following areas with lightweight machine oil (See Figure 24):**
  - (B)—Lip maintenance prop pivot
  - (C)—Lip banger pivots
  - (H)—Hold-down pivot/pulley
  - (J)—Safety leg linkage pivots
  - (L)—Hold down-to-platform pin

- **Lubricate the following areas with white lithium grease (See Figure 24):**
  - (A)—Lip hinge area (inject grease into all the lip hinge grease fittings)
  - (D)—Platform hinge area (inject grease into all the platform hinge grease fittings)
  - (E)—Lift arm roller bushing (2) grease fittings
  - (G)—Lift arm pivot
  - (K)—Lip assist pin

**Note:** Apply grease to lip hinge grease fittings if equipped. **Do not put grease or oil on the ratchet bar or cam!**

**NOTICE**

Failure to properly lubricate the dock leveler will cause abnormal operation of the leveler.
ADJUSTMENTS

Adjust Main Spring & Lip Assist Spring Tension

It is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

The maintenance prop MUST be in the service position when working under the dock leveler. For maximum protection, use an OSHA approved locking device to lock the maintenance prop in the service position. Only the person servicing the equipment should have the key to unlock the maintenance prop.

A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

DANGER

WARNING

WARNING
Adjust Main Spring & Lip Assist Spring Tension (continued)

**WARNING**
If the platform does not rise fully on its own, it may be necessary to use an external lifting device. Use a lifting device with the appropriate lifting capacity to safely raise the platform. Make sure to engage and pin the platform maintenance prop after raising the platform.

**NOTICE**
When using an external lifting device to raise the platform, make sure hold-down mechanism (6) is disengaged. Pull and hold platform release ring during the lifting process to avoid shearing the ratchet pawl and ratchet bar teeth.

If the platform does not rise fully and/or lip does not extend fully, the main lift spring tension may be set too low.

If the platform cannot be walked down or is difficult to walk down, the main lift spring tension may be set too high.

**Note:** Adjusting the tension of lift springs (D) usually requires that the lip assist spring (C) also be adjusted.

1. Raise the platform and engage the platform maintenance prop. Pin the maintenance prop in the service position using attached pin device.

2. Adjust tension of lift springs (D) as follows:

**Note:** Use 1/2 turn increments when adjusting lift spring bolt (E). Turn clockwise to increase tension and counterclockwise to decrease tension. Check platform operation after each adjustment. Repeat until proper operation is obtained.

   • To increase lift spring tension, turn lift spring bolt (E) clockwise.
   
   • To decrease lift spring tension, turn lift spring bolt (E) counterclockwise.

3. After lift spring adjustment is completed, check operation of the lip:

   • If the lip folds before the platform can be walked down, tension of lip assist spring (C) may be set too low.

   • If the lip does not fold fully or takes too long to fold, tension of lip assist spring (C) may be set too high.

4. Adjust lip assist spring tension as follows:

**Note:** Use two-turn increments when adjusting lip assist spring (3). Check lip operation after each adjustment. Repeat until proper operation is obtained.

   a. Loosen jam nut (A).

   b. To increase spring compression, turn nut (B) clockwise.

   c. To decrease spring compression, turn nut (B) counterclockwise.

   d. Tighten jam nut.

5. Recheck operation of platform and lip. Readjust lift spring tension and lip assist spring tension until proper operation is obtained.
ADJUSTMENTS

Adjust Lip Stop Bolt

When at rest, lip (E) should be fully resting on the lip keepers (D) and at the lowest part of the lip keepers. If lip is not resting properly in the lip keepers, perform the following adjustment:

1. Fully raise the platform and engage the maintenance prop in the service position. Manually raise the lip and engage lip maintenance prop (see page 24).

2. Loosen jam nut (B).

3. Adjust stop bolt (C) as necessary.
   • Turn stop bolt “in” (clockwise) to allow lip to fold closer to platform (A).
   • Turn stop bolt “out” (counterclockwise) to hold lip further away from platform (A).

4. Tighten jam nut (B).

5. Disengage lip maintenance prop.

6. Walk platform down to cross-traffic (stored) position.

7. Check lip position in both keepers. Repeat procedure if necessary.

TROUBLESHOOTING

**DANGER**

It is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

**WARNING**

The maintenance prop MUST be in the service position when working under the dock leveler. For maximum protection, use an OSHA approved locking device to lock the maintenance prop in the service position. Only the person servicing the equipment should have the key to unlock the maintenance prop.

**WARNING**

Always post safety warnings and barricade the work area at dock level and ground level to prevent unauthorized use of the dock leveler before maintenance is complete.

A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

* Provide dock leveler serial number and size of platform when e-mailing, calling or faxing orders.
This page intentionally left blank.
Customer Information

NOTE: Refer to Figure 27 for left/right orientation of dock leveler and Figure 28 for example of decal.

The LEVELER model/serial number decal is located on the left platform joist near the front (lip) of dock leveler (A).

When you receive your new equipment, write down the model and serial number in the form provided. This will help ensure safe keeping of the numbers in the event the model/serial number decal (A, B) becomes lost or damaged.

Also, write down Systems, LLC’s order number, the company that installed the dock leveler, and the original owner’s name. This will all help to identify the specific dock leveler if more information is required.

When ordering, use part numbers and description to help identify the item ordered. Do not use “item” numbers. These are only for locating the position of the parts. Always give dock leveler MODEL NUMBER and/or SERIAL NUMBER.

For service, call or contact:

Systems, LLC
P.O. Box 309
Germantown, WI 53022

Phone: (800) 643-5424
Fax: (262) 255-5917

www.loadingdocksystems.com
STANDARD PRODUCT WARRANTY

SYSTEMS, LLC warrants that its products will be free from defects in design, materials and workmanship for a period of one (1) year from the date of shipment. All claims for breach of this warranty must be made within 30 days after the defect is or can with reasonable care, be detected. In no event shall any claim be made more than 30 days after this warranty has expired. In order to be entitled to the benefits of this warranty, the product must have been properly installed, maintained and operated in accordance with all manufacturer’s recommendations and/or specified design parameters and not otherwise have been subject to abuse, misuse, misapplication, acts of nature, overloading, unauthorized repair or modification, application in a corrosive environment or lack of maintenance. Periodic lubrication, adjustment and inspection in accordance with all manufacturers’ recommendations are the sole responsibility of the Owner/User.

In the event of a defect, as determined by SYSTEMS LLC, covered by this warranty, SYSTEMS LLC shall remedy such defect by repairing or replacing any defective equipment or parts, bearing the cost for the parts, labor and transportation. This shall be exclusive remedy for all claims whether based on contract, negligence or strict liability.

WARRANTY LIMITATIONS

THE ABOVE WARRANTIES ARE IN LIEU OF ANY OTHER WARRANTIES, WHETHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SYSTEMS LLC AND ITS SUBSIDIARIES SHALL NOT IN ANY EVENT BE LIABLE TO ANYONE, INCLUDING THIRD PARTIES, FOR INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES OF ANY KIND INCLUDING BUT NOT LIMITED TO, BREACH OF WARRANTY, LOSS OF USE, LOSS OF PROFIT, INTERRUPTION OF BUSINESS OR LOSS OF GOODWILL.
