Recognize Precautionary Information

Safety-Alert Symbol

The Safety-Alert Symbol is a graphic representation intended to convey a safety message without the use of words. When you see this symbol, be alert to the possibility of death or serious injury. Follow the instructions in the safety message panel.

**DANGER**

The use of the word **DANGER** signifies the presence of an extreme hazard or unsafe practice which will most likely result in death or severe injury.

**WARNING**

The use of the word **WARNING** signifies the presence of a serious hazard or unsafe practice which could result in death or serious injury.

**CAUTION**

The use of the word **CAUTION** signifies possible hazard or unsafe practice which could result in minor or moderate injury.

**NOTICE**

The use of the word **NOTICE** indicates information considered important, but not hazard-related, to prevent machine or property damage.

**SAFETY INSTRUCTIONS**

Indicates a type of safety sign, or separate panel on a safety sign, where safety-related instructions or procedures are described.

**WARNING:** This product can expose you to chemicals including lead, which are known to the State of California to cause cancer or birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov

General Operational Precautions

Read and understand the Owner’s/User’s Manual and become thoroughly familiar with the equipment and its controls before operating the dock leveler.

Never operate a dock leveler while a safety device or guard is removed or disconnected.

Never remove DANGER, WARNING, or CAUTION signs, Placards or Decals on the equipment unless replacing them.

Do not start the equipment until all unauthorized personnel in the area have been warned and have moved outside the operating zone (see Figure 1).

Remove any tools or foreign objects from the operating zone before starting.

Keep the operating zone free of obstacles that could cause a person to trip or fall.

Figure 1
Operational Precautions

Learn the safe way to operate this equipment. Read and understand the manufacturer’s instructions. If you have any questions, ask your supervisor.

**DANGER**

Stay clear of dock leveling device when transport vehicle is entering or leaving area.

Do not move or use the dock leveling device if anyone is under or in front of it.

Keep hands and feet clear of pinch points. Avoid putting any part of your body near moving parts.

**WARNING**

Chock/restrain all transport vehicles. Never remove the wheel chocks or release the restraining device until loading or unloading is finished, and transport driver has been given permission to drive away.

Do not use a broken or damaged dock leveling device or restraining device. Make sure proper service and maintenance procedures have been performed before using.

Make sure lip overlaps onto transport vehicle bed at least 4 in. (102 mm).

Keep a safe distance from both side edges.
Operational Precautions

**WARNING**

Do not use dock leveling device if transport vehicle is too high or too low.

Do not overload the dock leveling device.

Do not operate any equipment while under the influence of alcohol or drugs.

Do not leave equipment or material unattended on dock leveling device.
### Safety Decals

1. **DO NOT FORK THIS SIDE**
2. **DO NOT FORK THIS SIDE**
3. **DO NOT FORK THIS SIDE**
4. **DO NOT FORK THIS SIDE**

#### DANGER

**CRUSH HAZARD**

DO NOT ENTER PIT unless dock leveler is securely supported by maintenance prop. Failure to comply will result in death or serious injury. See owner's/user's manual for proper maintenance procedures.

**CRUSH HAZARD**

Maintenance prop must be secured in the upright position. Failure to comply will result in death or serious injury. See owner's/user's manual for proper procedures.

**CRUSH HAZARD**

DO NOT REMOVE hydraulic cylinder until leveler is safely supported by maintenance prop. Refer to owner/user's manual for proper maintenance procedure. Failure to comply will result in death or serious injury.

**CRUSH HAZARD**

Maintenance prop must be turned off and locked in the upright position to prevent unintended prop movement. Failure to comply will result in death or serious injury. See owner/user's manual for proper procedures.

#### SAFETY INFORMATION

- **SAFETY INFORMATION**
  - In-unstacked dock leveler, ensure all levels are completely closed before allowing vehicle to leave dock after unstacking.
  - Ensure no equipment, vehicle or person are on dock leveler.
  - Return dock leveler to its stored position at dock level.

#### Figure 2

![Diagram of dock leveler with safety decals labeled](Image)
OPERATING INSTRUCTIONS

DANGER

- Read and follow all instructions, warnings, and maintenance schedules in the manual and on placards.
- Operation and servicing of dock leveler is restricted to authorized personnel.

• Always chock transport vehicle wheels or engage vehicle restraint and set parking brakes before operating dock leveler or beginning to load or unload.
• Before activating dock leveler, check to make sure the transport vehicle is positioned squarely against dock bumpers. Ensure lip will avoid contact with transport vehicle frame, sides and cargo during dock leveler activation. If contact is likely or observed, reposition transport vehicle.
• Ensure the transport vehicle floor supports extended lip or the leveler frame (lip keepers or below dock endload supports) supports the ramp before driving on ramp.
• Stay clear of hinges and front and sides of moving dock leveler.
• Never use hands or equipment to move the ramp or lip.
• Never use damaged or malfunctioning dock-leveler. Report problems immediately to supervisor.
• Always store dock leveler and remove people, material, and equipment from ramp before vehicle leaves the dock.
• DO NOT ENTER PIT unless dock leveler is securely supported and proper lockout/tagout procedures have been completed. See "Maintenance Precautions" in Owner’s/User’s Manual.

FAILURE TO FOLLOW THESE INSTRUCTIONS WILL RESULT IN DEATH OR OTHER SERIOUS INJURY.

NORMAL OPERATION

1. Raise the platform by Pressing and holding the RAISE button.

2. Hold the RAISE button until the lip is fully extended, then release the RAISE button. The platform will lower until lip is resting on the transport vehicle.

STORING LEVELER

1. Press the RAISE button until the lip is completely folded. When the lip is folded, release the RAISE button. The platform will lower returning to the cross-traffic position.

BELOW DOCK ENDOLOADING

• (AIR POWERED ONLY) Press and hold the RAISE button until the leveler is 12” above dock level. Pull the below dock level chain until the leveler lowers the full below dock position.

• (HYDRAULIC ONLY) Press and hold the RAISE button until the leveler is fully raised. As the lip starts to extend, release the RAISE button. The leveler will lower to the below dock position provided the lip extension allows the lip to clear the lip keepers.

• (HYDRAULIC WITH INFINITE LIP CONTROL) If equipped, raise the platform by Pressing and holding the RAISE button. When the lip is just above the lip keepers, simultaneously Press and hold the RAISE button and the LIP OUT button until lip has extended beyond the lip keepers. Release both buttons.

NOTE: If equipped, Pressing E-STOP button will stop platform from lowering.
OWNER’S/USER’S RESPONSIBILITIES

1) The manufacturer shall provide to the initial purchaser and make the following information readily available to the owners/users and their agents, all necessary information regarding Safety Information, Operation, Installation and Safety Precautions, Recommended Initial and Periodic Inspections Procedures, Planned Maintenance Schedule, Product Specifications, Troubleshooting Guide, Parts Break Down, Warranty Information, and Manufacturers Contact Information, as well as tables to identify the grade(slope) for all variations of length or configuration of the dock leveling device and information identifying the maximum uncontrolled drop encountered when sudden removal of support while in the working range of the equipment.

2) When selecting loading dock safety equipment, it is important to consider not only present requirements but also future plans and any possible adverse conditions, environmental factors or usage. The owners/users shall provide application information to the manufacturer to receive recommendations on appropriate equipment specifications and capacity.

3) The owner/user must see all nameplates, placards, decals, instructions and posted warnings are in place and legible and shall not be obscured from the view of the operator or maintenance personnel for whom such warnings are intended for. Contact manufacturer for any replacements.

4) Dock leveling devices may become hazardous if the manufacturer’s instructions regarding modifications or adjustments are not followed. Modifications or alterations of dock leveling devices shall only be made with prior written approval from the original manufacturer. These changes shall be in conformance with all applicable provisions of the MH30.1 standard and shall also satisfy all safety recommendations of the original equipment manufacturer of the particular application.

5) The owner/user should recognize the inherent dangers of the interface between the loading dock and the transport vehicle. The owner/ user should, therefore, train and instruct all operators in the safe operation and use of the loading dock equipment in accordance with manufacturer’s recommendations and industry standards. Effective operator training should also focus on the owner’s/user’s company policies, operating conditions and the manufacturer’s specific instructions provided with the dock leveling device. Maintaining, updating and retraining all operators on safe working habits and operation of the equipment, regardless of previous experience, should be done on a regular basis and should include an understanding and familiarity with all functions of the equipment. Owners/users shall actively maintain, update and retrain all operators on safe working habits and operations of the equipment.

6) An operator training program should consist of, but not necessarily be limited to, the following:
   a) Select the operator carefully. Consider the physical qualifications, job attitude and aptitude.
   b) Assure that the operator reads and fully understands the complete manufacturer’s owners/users manual.
   c) Emphasize the impact of proper operation upon the operator, other personnel, material being handled, and equipment. Cite all rules and why they are formulated.
   d) Describe the basic fundamentals of the dock leveling device and components design as related to safety, e.g., mechanical limitation, stability, functionality, etc.
   e) Introduce the equipment. Show the control locations and demonstrate its functions. Explain how they work when used properly and maintained as well as problems when they are used improperly.
   f) Assure that the operator understands the capacity rating, nameplate data, placards and all precautionary information appearing on the dock leveling device.
   g) Supervise operator practice of equipment.
   h) Develop and administer written and practical performance tests. Evaluate progress during and at completion of the course.
   i) Administer periodic refresher courses. These may be condensed versions of the primary course and include on-the-job operator evaluation.
7) Loading dock safety equipment should never be used outside of its vertical working range, or outside the manufacturer’s rated capacity. It shall also be compatible with the loading equipment and other conditions related to dock activity. Please consult the manufacturer if you have any questions as to the use, vertical working range or capacity of the equipment. Only properly trained and authorized personnel should operate the equipment.

8) It is recommended that the transport vehicle is positioned as close as practical to the dock leveling device and in contact with both bumpers. When an industrial vehicle is driven on or off a transport vehicle during loading and unloading operations, the transport vehicle parking brakes shall be applied and wheel chocks or a restraining device that provides equal or better protection of wheel chocks shall be engaged. Also, whenever possible, air-ride suspension systems should have the air exhausted prior to performing said loading and unloading operations.

9) When goods are transferred between the loading dock and a trailer resting on its support legs/landing gear instead of a tractor fifth wheel or converter dolly, it is recommended that an adequate stabilizing device or devices shall be utilized at the front of the trailer.

10) In order to be entitled to the benefits of the standard product warranty, the dock safety equipment must have been properly installed, maintained and operated in accordance with all manufacturer’s recommendations and/or specified design parameters and not otherwise have been subject to abuse, misuse, misapplication, acts of nature, overloading, unauthorized repair or modification, application in a corrosive environment or lack of maintenance. Periodic lubrication, adjustment and inspection in accordance with all manufacturers’ recommendations are the sole responsibility of the owner/user.

11) Manufacturer’s recommended maintenance and inspection of all dock leveling devices shall be performed in conformance with the following practices: A planned maintenance schedule program must be followed, only trained and authorized personnel shall be permitted to maintain, repair, adjust and inspect dock leveling devices, and only the use of original equipment manufacturer parts, manuals, maintenance instructions, labels, decals and placards or their equivalent. Written documentation of maintenance, replacement parts or damage should be kept. In the event of damage, notification to the manufacturer is required.

12) Loading dock devices that are structurally damaged or have experienced a sudden loss of support while under load, such as might occur when a transport vehicle is pulled out from under the dock leveling device, shall be removed from service, inspected by a manufacturer’s authorized representative, and repaired or replaced as needed or recommended by the manufacturer before being placed back in service.
This manual provides current information on the XL-series dock leveler. Due to ongoing product improvement, some parts may have changed, along with operation and troubleshooting methods. This manual describes these changes where applicable.

The XL-series dock leveler comes equipped with an electrical control panel, which allows push button operation of the dock leveler functions. When combining a XL-series dock leveler with a Poweramp hydraulic vehicle restraint, the control panel will allow for operation of both units in the same control panel.

Each XL-series dock leveler unit and control panel has been factory pre-wired and tested to ensure satisfactory operation.

To illustrate which connections are to be made in the field at installation, electrical drawings are included with each order or by contacting Systems, LLC Technical Services.

XL dock levelers are available in the following sizes, weight capacities, and options:

**Width: XL**
- 8 ft (2438 mm)
- 8-1/2 ft (2590 mm)
- 9 ft (2743 mm)

**Length**
- 8 ft (2438 mm)
- 10 ft (3048 mm)
- 12 ft (3658 mm)

**Capacity (CIR*)**
- 45,000 lb (20 411 kg)
- 50,000 lb (22 679 kg)
- 60,000 lb (27 215 kg)
- 80,000 lb (36 287 kg)

* CIR (Comparative Industry Rating)

Call Poweramp to discuss available voltages, phases and options to meet your specific needs.

Technical Service at 800-643-5424 or techservices@loadingdocksystems.com
Component Identification

Inspect package and all components. Report any missing or damaged items immediately and note on the shipping Bill Of Lading (BOL).

A — Lip
B — Platform
C — Lip Cylinders
D — Powerpack (Motor/Pump/Reservoir)
E — Inspection Plate
F — Logic Block
G — Dual-Lanyard Pull Ring
H — Hoist cylinders
J — Main Frame
K — Maintenance Props
L — Lip Keepers (2 used)
M — Toe Guard (2 used)
N — Control Box*

*Control box appearance may vary depending on options.
**Installation Precautions**

**DANGER**

It is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

**WARNING**

Always post safety warnings and barricade the work area at dock level and ground level to prevent unauthorized use of the dock leveler before installation is complete.

A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

**CAUTION**

Only trained installation professionals with the proper equipment should install this product.

**NOTICE**

DO NOT connect the dock leveler electrical wiring and ground connections until all welding has been completed.

DO NOT ground welding equipment to any hydraulic or electrical components of the dock leveler. Always ground welding equipment to the dock leveler frame, NEVER to the platform.

Failure to follow these instructions may damage the motor, hydraulics, wiring, and/or control panel.

**NOTICE**

DO NOT remove the shipping bands around the dock leveler lip until instructed to do so.
INSTALLATION

Prepare Pit

Before lowering the dock leveler into the pit, the following must be performed:

1. Remove all debris from the pit and sweep the pit clean.

2. Check the entire dock leveler pit for proper construction according to approved/certified pit drawings. Make sure pit is square by making the following measurements (see Figure 5):

   • Measure pit width distance (A) at both front and rear of pit.
   • Measure dock floor-to-pit floor distance (B) at all four corners.
   • Measure pit length distance (C) at both sides.
   • Measure corner-to-corner (diagonal) distance (D) at both sides. Take measurements at dock floor level and at pit floor level.

If any measurement is off by more than 1/8 in. (3.18 mm), contact Systems, LLC Technical Services before proceeding.

3. Make sure the field junction box for the dock leveler is at the correct location per pit diagrams.
Prepare Dock Leveler

Poweramp dock levelers are shipped with lifting brackets (A) fastened to the platform side joists, and shipping bands (B) around the platform lip and leveler frame (see Figure 6).

1. Remove any bumpers and/or control panels that may be banded to the frame of the dock leveler.

**NOTICE**

DO NOT remove the shipping bands (B) around the platform lip and leveler frame at this time. The shipping bands are needed to hold the leveler together during the installation process.

**Note:** Overall width of platform and lifting brackets (A) must be kept to a minimum to prevent interference between the lifting brackets and the pit walls as the dock leveler is lowered into the pit.

2. Make sure the mounting hardware of lifting brackets (A) is snug. The brackets should pivot without binding on the mounting cap screw.

**NOTICE**

DO NOT over-tighten the lifting bracket hardware. Over-tightening can damage the weather seal, if equipped.

3. Attach lifting chains to lifting brackets (A) and to a lifting device (i.e., hoist or fork truck) having the appropriate lifting capacity and reach.

4. Remove wood blocks that are attached to the leveler frame before putting the dock leveler into the pit.

INSTALLATION

Install Dock Leveler

Figure 7

Figure 8

Figure 9

A— Distance (Leveler Frame Height)
B— Shim Locations (Under Rear Vertical Supports)
C— Shim Location (Under Maintenance Props)
D— Shim Locations (Under Lip Keepers)
E— Dock Floor
F— Rear Pit Curb Angle
G— String
H— Rear Hinge Frame Angle
J— Shim Locations (Under Hoist Cylinders)
K— Distance (Dock Floor-to-Pit Floor)
L— Distance (Top of Shim Stack-to-Dock Floor)
M— Shim Stack
N— Dock Leveler Frame
P— Lip Keeper Shim (as required)
**Install Dock Leveler (continued)**

**Note:** Poweramp dock levelers are designed with a nominal 1/2” (12.7 mm) shimming distance to allow for pit inconsistencies.

1. Determine height of shim stack (M) for each shim location (B) by performing the following:

   a. Measure leveler frame height distance (A).

   b. Measure dock floor-to-pit floor distance (K) at each shim location (B). Write down the dimensions obtained at each location.

   c. Subtract distance (A) from distance (K) to obtain the shim height. Repeat for each shim location.

2. Using the results obtained in step 1, create the individual shim stacks on the pit floor at location (B). Build each shim stack (M) with the top shim having a minimum size of 4” x 4” (101.6 mm x 101.6 mm) and each successive lower shim being larger so the shims can be welded together using a fillet weld. If using offset method, make sure load is over center of shim stack, NOT over the edge. DO NOT use straight method. See Figure 10.

![Shim Stacking Methods](image)

**Figure 10**

**Note:** A 1/4” (6.6 mm) thick shim at locations (C and D) are used only as a starting point. The final shim stack height will be determined after dock leveler is lowered into the pit.

3. Verify that each shim stack is at the correct height by measuring distance (L) [top of shim stack (M) to dock floor]. Distance (L) must equal the dock leveler height (A).

4. For standard models, put a 1/4 in. (6.6 mm) thick shim at locations (C and D). For CleanPit models, put a 1/4 in. (6.6 mm) thick shim at location (D) only.

5. Using an appropriate lifting device connected to the lifting brackets, lower dock leveler into the pit so rear hinge frame angle (H) is tight against rear pit curb angle (F) across full width of the leveler frame.

6. Allow rear of dock leveler to rest on the rear shims while keeping the front of the dock leveler level with the dock floor.

7. For all standard models, add shims at front shim locations (C and D) so front of dock leveler will stay level with dock floor when leveler is resting fully on shims. For CleanPit models, add shims only at front shim location (D).

**NOTICE**

The minimum size of the shim that contacts the leveler frame (i.e. the top shim of each shim stack) must be at least 4” x 4” (101.6 mm x 101.6 mm) to support the full width of the frame rail and to provide a shelf for a fillet weld.

Use the thickest shim stock possible for stability and weld penetration purposes. DO NOT use multiple layers of 1/8 in. (3.18 mm) or thinner shim stock.

**Warning**

The dock leveler is heavy. Use a lifting device and chains with the appropriate lifting capacity and reach.

Always use the lifting brackets provided with the unit whenever lowering or lifting a dock leveler into or out of a pit.

Note: To assist in obtaining an accurate measurement of distance (L), use a string (G) pulled tight across the pit opening, directly over the shim locations.
8. With rear hinge frame angle (F) tight against rear pit curb angle (G), perform/check the following:

- Pry between the platform and rear hinge frame angle at locations (E) to make sure rear edge of platform is parallel to the rear hinge frame angle (F).

- Gap (D) must exist equally along both sides of leveler so weather seal (if equipped) will not bind during dock leveler operation.

9. If gap (D) cannot be obtained equally at both sides of leveler, grind or add material at the rear edge of rear hinge frame angle (F) as needed.

10. Allow the dock leveler to rest fully on the shim stacks. Check that a smooth and level transition exists between the dock floor and the dock leveler platform. Add or remove shims as necessary until a smooth transition is obtained.

11. If leveler cannot be squared and/or made level as instructed in steps 8-10, contact Systems, LLC Technical Services.
Install Dock Leveler (continued)

**NOTICE**

DO NOT weld continuously along the full length of the rear hinge frame angle. This can put unnecessary stress on the leveler components, causing the leveler to malfunction and shorten the lifespan of the affected components.

12. With the rear hinge frame angle (F) tight against the rear pit curb angle (G), weld the rear hinge frame angle (F) to the rear pit curb angle (G) using a 3/8 in. (9.5 mm) flare bevel skip weld — each weld being 6 in. (152 mm) long.

• Start at each end with a 6 in. (152 mm) long weld. Space all the other welds out evenly, leaving approximately 6 in. (152 mm) space between each weld.

**Note:** Figure 11 shows a typical weld pattern. The weld pattern will vary slightly depending on size of dock leveler.

13. Weld front of dock leveler frame (B) to shims located under the keepers, then weld the shims to the front pit curb steel.

14. With leveler welded into place, remove the shipping bands from around lip and leveler frame.

15. Using an external lifting device (i.e. crane or fork truck) attached to the platform lifting brackets, slowly raise the platform. Check for binding as platform is being raised.

16. If binding occurs, lower the platform. Reposition leveler and/or add or remove shims as necessary. Slowly raise platform again. If platform still binds, contact Systems, LLC Technical Services for further instructions.

**WARNING**

If the platform is raised using an external lifting device or the hydraulic system is opened to atmosphere, air will enter into the hydraulic system.

Whenever this happens, always cycle the leveler at least 4 times using the leveler’s own hydraulic power system before allowing the leveler to be put into service. This is to make sure all air is purged from the hydraulic cylinders.
17. Step 17 differs depending on XL model:*

**Standard models:**

a. Install shims under maintenance prop (C) where prop attaches to leveler frame. Make sure prop is solidly shimmed.

b. Raise maintenance prop (C) to the service (upright) position and lock prop in this position using an OSHA approved locking device.

c. Position base of maintenance props (C) so center of props are approximately 8-1/2 in. (216 mm) (D) to left and right of dock leveler center. Adjust position of prop base so opposite end of prop will go between the platform joists (A) when prop is fully raised. The prop must not contact the joists, wiring, or other components.

d. Tack weld the prop base to front pit curb steel. Raise the prop to the upright position to make sure the prop does not contact a platform joist. The prop must rest against the inside corner of the lip hinge header.

e. When proper operation of the prop is confirmed, finish weld the prop base to the front pit curb steel.

**CleanPit models:**

a. Temporarily support platform in the full raised position using an external lifting device. Provide addition support using two 4 x 4 in. (102 x 102 mm) wood beams of sufficient length, one at each side of platform. *(Use of two steel supports having sufficient strength is acceptable.)*

b. Remove maintenance prop (C) from the shipping location on dock leveler frame.

c. Position base of maintenance props (C) so center of props are approximately 8-1/2 in. (216 mm) (D) to left and right of dock leveler center. Adjust position of prop base so opposite end of prop will go between the platform joists (A) when prop is fully raised. The prop must not contact the joists, wiring, or other components.

d. Tack weld the prop base to front pit curb steel. Raise the prop to the upright position to make sure the prop does not contact a platform joist. The prop must rest against the inside corner of the lip hinge header.

e. When proper operation of the prop is confirmed, finish weld the prop base to the front pit curb steel.

f. Move the maintenance prop to the service (upright) position. Remove the temporary supports installed in step (a) of this procedure and lower the platform onto the prop using the external lifting device. Confirm the prop is properly engaged. DO NOT disconnect the external lifting device at this time.

g. Proceed to step 18.

*Standard model shown in Figure 12.*
Install Dock Leveler (continued)

![Shim Stacking Methods]

18. Install shims at locations (B) using an appropriate shimming method. Both hoist cylinder trunnions must be solidly shimmed the entire length of the trunnion. Make sure the trunnions are level from side-to-side as well as from front-to-back.

19. Finish weld all shims using a fillet weld.
   - Weld all shims within each shim stack to each other, then weld the shim stack to the leveler frame.
   - Weld the front leveler frame shim stacks to the front pit curb steel.

![WARNING]

Make sure the platform is properly supported in the raised position before entering the pit to finish weld the shims.

20. When all welding has been completed, paint all the welds and shims.

![NOTICE]

CleanPit models are shipped with a T-frame installed. This temporary frame holds the leveler frame at the correct dimensions until the leveler is permanently anchored into place. Only then should it be removed.

There are six cap screws and nuts that fasten the T-frame to the rest of the leveler frame. Tack welds may also be used.

22. Install the XL dock bumpers; see page 20 for instructions.
Install XL Bumpers

The XL dock leveler uses special spring-loaded sliding bumpers (Figure 14) that move with the leveler, providing complete access to the truck when below dock. See Figure 15 for a cutaway view. These bumpers must be mounted in line with the bumper pads on the dock leveler platform (F, see Figure 16).

**Note:** XL sliding bumpers must be mounted to a poured concrete wall.

1. With the leveler in its stored position, align bumper mounts (D) with bumper pads (F) on dock leveler platform (A). Without compressing the bumper assembly, keep the top of the bumper flush with the underside of the bumper pad stop. (See Figure 15b).

2. Install two (2) 5/8" x 4-3/4" anchors in lower bumper mount holes (E).

3. Weld upper portion of bumper mounts to the curb angle (B).

Install XL Bumpers (continued)

A - Dock Leveler Platform
B - Curb Angle
C - Drive
D - Bumper Mount
E - Anchor Holes
F - Platform Bumper Pads

Figure 16

Note: Dock leveler hydraulics and frame not shown for clarity.
INSTALLATION

Install Control Panel and Wiring

⚠️ DANGER
Make sure that the power source has been locked out and tagged according to OSHA regulations and approved local electrical codes.

⚠️ WARNING
A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

⚠️ CAUTION
All electrical work — including the installation of the disconnect panel, control panel, and final connections to the pit junction box — must be performed by a certified electrician and conform to all local and applicable national codes.

NOTICE
DO NOT connect any dock equipment electrical wiring or ground connections until all welding has been completed.

DO NOT ground welding equipment to any electrical components of the dock equipment. Always ground welding equipment to the dock leveler frame, NEVER to the platform.

Failure to follow these instructions may damage the motor, wiring, and/or control panel.

NOTICE
Where indicated, all components must be connected to a SAFETY EARTH GROUND that conforms to the 1999 National Electrical Code Section 250-50 section (a) or section (c) for a grounding electrode system.

1. Mount the control panel (B) so bottom of control panel-to-dock floor distance is 48 in. (1219 mm, C).

2. Install electrical disconnect panel (A) if not already installed (provided by others). It is recommended to locate disconnect panel adjacent to control panel (B).

3. Install and connect the control wiring as shown in installation drawings.

4. Connect the control wiring to the field wires in the dock equipment junction boxes. Refer to the electrical diagrams supplied with the dock equipment.

Note: When installing electrical controls in a temperature-controlled environment, the installer must determine an appropriate means to isolate/prevent thermal and vapor transfer through electrical conduit where conduit routing crosses temperature zones. Systems, LLC is not responsible for any damage due to moisture collecting inside the control panel caused by improper isolation/prevention of thermal and vapor transfer through the conduit. Refer to Tech Service Bulletin 19-053 for more information.

5. Install placard (D). Make sure placard is in plain view of dock leveler and/or vehicle restraint operations. Suggested placement of placard is near control box attached to electrical conduit by using nylon cable tie. See page 23.
Placard Installation Instructions

- Owner/Users are responsible for the installation and placement of product placards.
- Make sure placard is in plain view of dock leveler and/or vehicle restraint operations.
- Suggested placement of placard is near control box attached to electrical conduit by using nylon tie. If there is no control box present, mount placard on wall to the immediate left of leveler at eye level.

Figure 18
INSTALLATION

Put New Dock Leveler Into Service

**WARNING**
A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

1. Disconnect the external lifting device and chains from the lifting brackets.

2. Check that the leveler is flush with the dock floor and that the platform lip contacts both lip keepers evenly.

**Note:** If an excessive transition exists between the dock floor and leveler and/or lip does not contact both lip keepers evenly, contact Systems, LLC Technical Services for further instructions.

3. Turn the main electrical power ON.

4. Raise the leveler platform fully by Pressing and holding the RAISE button.

**Note:** The platform of a properly operating dock leveler will automatically stop rising when it reaches its maximum full raised height, at which point, the lip extends. When the lip is fully extended, the powerpack will go into pressure relief. (If the lip does not extend correctly, see Troubleshooting section.)

5. Release the RAISE button to lower the platform. As long as there is no vehicle present at the dock, the platform will lower to the full below-dock position as the lip folds.

**Note:** If a transport vehicle is present, the platform will lower until the lip rests on the transport vehicle’s bed.

6. When the platform lowers to the full below-dock position, Press and hold the RAISE button until the platform rises just enough to clear the lip keepers, then release the RAISE button to allow the platform to lower to the cross-traffic (stored) position (lip engages lip keepers).

**Note:** For dock levelers equipped with the Auto Return To Dock (ARTD), the platform will automatically return to the cross-traffic position if the ARTD is enabled. When the platform is at the full below-dock position, there is a six-second delay before the platform will automatically rise to the cross-traffic position.

7. Perform steps 4-6 at least four times to purge any air that may be in the hydraulic system and to ensure proper operation.

8. Raise the platform fully. Hold the platform at this position using the RAISE button and move the maintenance prop to the service (upright) position. Release the RAISE button to allow the platform to lower until it is resting on the maintenance prop.

**DANGER**

Unless the dock leveler is equipped with a tethered remote, two people are required to engage the maintenance prop: one person to operate the unit, the other person to engage the maintenance prop.

In addition, it is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

9. Secure the maintenance prop with the maintenance prop lock-out.

10. With the maintenance prop supporting the platform, remove the lifting brackets.

11. Release the maintenance prop by unlocking the lock-out.

12. Press and hold the RAISE button until the maintenance prop drops to its stored position. Release the RAISE button and allow the platform to lower fully.
Operational Precautions

**DANGER**

Stay clear of dock leveler and vehicle restraint when transport vehicle is entering or leaving dock area.

DO NOT move or use the dock leveler or restraint if anyone is under or in front of leveler.

Keep hands and feet clear of pinch points. Avoid putting any part of your body near moving parts.

---

**WARNING**

Only trained personnel should operate the dock leveler.

DO NOT use a broken or damaged dock leveler.

Make sure proper service and maintenance procedures have been performed on leveler before using.

Transport vehicle wheels must be chocked unless a vehicle restraint is used. Never remove the wheel chocks until loading/unloading is finished and transport driver has been given permission to leave.

Make sure platform lip rests on the transport vehicles bed with at least 4 in. (102 mm) of overlap.

Maintain a safe distance from side edges of leveler during the loading/unloading process.

---

**WARNING**

The XL hydraulic dock leveler is designed to compensate for a maximum ± 12 in.* (305 mm) of height difference between the loading dock and the transport vehicles bed. DO NOT use the dock leveler if the transport vehicles bed is more than 12 in. (305 mm) higher or lower than the dock floor.

*Service height may vary with design specifications

DO NOT overload the dock leveler.

DO NOT operate any equipment while under the influence of alcohol or drugs.

DO NOT leave equipment or material unattended on the dock leveler.
OPERATION

Operating Instructions
Ramp Loading/Unloading

1. Before activating dock leveler, check to make sure the transport vehicle is positioned squarely against dock bumpers. Ensure lip will avoid contact with transport vehicle frame, sides and cargo during dock leveler activation. If contact is likely or observed, reposition transport vehicle.

2. Instruct driver to remain at the dock until the loading or unloading process has been completed.

3. Chock the transport vehicle wheels, or use a vehicle restraint if available.

4. Extend the dock leveler onto the transport vehicle as follows:
   a. Raise the platform by pressing and holding the RAISE button or lightly pulling and holding dual-lanyard pull ring (see Figure 19).
   b. Hold the RAISE button or hold the pull ring until the lip is fully extended, then release the RAISE button or pull ring. The platform will lower until the lip is resting on the transport vehicle bed.
   c. Make sure that the lip is fully extended and supported on the transport vehicle along the entire width of the platform, with at least 4 in. (102 mm) of lip contacting the transport vehicle bed. See Figure 20.

5. Proceed with loading or unloading the transport vehicle.

6. When loading or unloading is finished, raise the platform by pressing and holding the RAISE button or holding the pull ring until the lip folds enough to land in the lip keepers, then release the RAISE button or pull ring. The platform will return to the cross-traffic position. See Figure 21.

7. Remove chocks from transport vehicle wheels, or release the vehicle restraint if used.

8. Indicate to driver that the transport vehicle may leave the dock.
Operating Instructions (continued)

End Loading/Unloading

1. Before activating dock leveler, check to make sure the transport vehicle is positioned squarely against dock bumpers. Ensure lip will avoid contact with transport vehicle frame, sides and cargo during dock leveler activation. If contact is likely or observed, reposition transport vehicle.

2. Instruct driver to remain at the dock until the loading or unloading process has been completed.

3. Chock the transport vehicle wheels, or use a vehicle restraint if available.

4. If transport vehicle bed is at or above dock floor level, leave leveler at the cross-traffic position and proceed with loading or unloading (see Figure 22). If transport vehicle bed is below the dock floor level, continue with Step 5.

5. Raise the platform by pressing and holding the RAISE button or lightly pulling and holding dual-lanyard pull ring until the lip extends just enough to clear the lip keepers, then release the RAISE button or pull ring.

6. Allow the platform to drift down to the full below-dock position.

7. Proceed with loading or unloading (see Figure 23).

Note: When end unloading is finished and access to the rest of the transport vehicle is still required, the platform lip will need to be extended. See Ramp Loading/Unloading Instructions on page 26 for further instructions.

8. When end loading or unloading is finished, raise the platform by pressing and holding the RAISE button or holding the pull ring until the lip folds enough to land in the lip keepers, then release the RAISE button or pull ring. The platform will return to the cross-traffic position.

9. Remove chocks from transport vehicle wheels, or release the vehicle restraint if used.

10. Indicate to driver that the transport vehicle may leave the dock.
Optional Equipment

Quick Cycle Lip Extend (Lip Out)

**Note:** For dock levelers equipped with optional Quick Cycle Lip Extend/Lip Out, the dock leveler lip can be extended independently of the leveler platform with the following sequence:

2. When leveler begins to raise, press and hold the LIP button in addition to the RAISE button. Leveler will stop raising and lip will extend.

3. When lip has fully extended, release RAISE and LIP buttons. Leveler will fall into transport vehicle with lip fully extended.

4. Continue with step 5 in “Operating Instructions."

Emergency Stop (E-Stop)

**Note:** For dock levelers equipped with optional Emergency Stop (E-Stop), dock leveler can be halted in place by using the EMERGENCY STOP button:

1. While operating any function of the dock leveler, press the EMERGENCY STOP button.

2. Equipment being operated will halt in place.

3. When hazard has been cleared or system must be operated, pull the EMERGENCY STOP button outward.

**CAUTION**

Whenever end loading or unloading with the platform in the below-dock position, make sure the ARTD switch is in the OFF position. DO NOT turn the ARTD switch to the ON position until end loading or unloading is finished.

Auto Return To Dock (ARTD)

**Note:** For dock levelers equipped with optional Auto Return To Dock (ARTD), the dock leveler can self-store if a transport vehicle departs the loading dock before the platform is stored.

To enable Auto Return To Dock, turn the ARTD switch to the ON position. If end loading or unloading is required, turn the ARTD switch to the OFF position and follow the steps on page 27. When end loading or unloading is complete, turn the ARTD switch back to the ON position, and the dock leveler will self-store.

**WARNING**

When Emergency Stop is active, DO NOT go under the dock leveler, walk or drive on the dock leveler, or leave forklift and/or material sitting on the leveler!

If Emergency Stop button is pressed with the dock leveler unsupported in the working zone, the leveler will descend when E-Stop is released!

Always make sure the platform is properly supported in the raised position before entering the pit or going under the dock leveler.

4. Continue operating dock equipment as needed.
**Maintenance Precautions**

**DANGER**

Unless the dock leveler is equipped with a tethered remote, two people are required to engage the maintenance prop: one person to operate the unit, the other person to engage the maintenance prop.

In addition, it is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

**WARNING**

Always post safety warnings and barricade the work area at dock level and ground level to prevent unauthorized use of the unit before maintenance is complete.

When working with electrical or electronic controls, make sure that the power source has been tagged (A) and locked out (B) according to OSHA regulations and approved local electrical codes (see Figure 24).

Whenever maintenance is to be performed under the dock leveler platform, support the platform with maintenance prop (C). Position the maintenance prop behind front header plate (D) while staying clear of the lip. The lip will fold down after the platform has rested on the maintenance prop. Lock the maintenance prop in the service (upright) position using an OSHA approved lockout device* (B) and tag out device* (A). See Figures 25 and 26.

Only the person servicing the equipment should have the capability to remove the lockout devices. The tag out devices* must inform that repairs are in process and clearly state who is responsible for the lockout condition.

**WARNING**

A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

* Refer to OSHA regulations 1910.146, Confined Space and 1910.147, Lockout/Tagout
MAINTENANCE

Periodic Maintenance

To ensure normal operation of the dock leveler, use only aircraft hydraulic fluid designed to meet or exceed military specification MIL-H-5606-G. It is recommended that the following hydraulic fluids be used:

- ULTRA-VIS-HVI-15
- Aero Shell Fluid 4 or Fluid 41
- Mobil Aero HFA Mil-H5606A or Aero HF
- Texaco Aircraft Hydraulic Oil 15 or 5606
- Exxon Univis J13
- Castrol Brayco Micronic 756

These fluid brands can be mixed together. Use of hydraulic fluids with equivalent specifications to those listed here are acceptable.

Weekly Maintenance

- Operate the dock leveler through the complete operating cycle to maintain lubrication.

Note: To thoroughly inspect the platform hinge area, put the platform in the full below-dock position.

- Inspect the platform hinge and the lip hinge areas. The hinge areas must be kept free of dirt and debris. Build-up of foreign material in the hinge areas will cause abnormal operation.

- Inspect warning decals and placards. Replace if damaged or missing.

An inspection plate (C) is provided in the platform floor for ease of maintenance and pit inspection.

Weekly Maintenance

• Operate the dock leveler through the complete operating cycle to maintain lubrication.

Note: To thoroughly inspect the platform hinge area, put the platform in the full below-dock position.

• Inspect the platform hinge and the lip hinge areas. The hinge areas must be kept free of dirt and debris. Build-up of foreign material in the hinge areas will cause abnormal operation.

• Inspect warning decals and placards. Replace if damaged or missing.

Use of fluids that do not have equivalent specifications to those in the preceding list will result in abnormal operation of the dock leveler and voiding of warranty.
**Quarterly Maintenance**

- Complete Weekly Maintenance.

- Inspect the following for damage/abnormal wear:
  - Check welds for cracks.
  - Cylinder pins and mounting holes.
  - Lip hinge pins and rear hinge pins.
  - Check toe guards for free movement.
  - Check J-box for water damage.
  - Inspect hoses, cylinders, fittings and powerpack.
  - Control box and conduit for damage.
  - Bumpers for more than 1” of wear.
  - Side and rear weather seals.

- Lubricate the following areas with light weight machine oil (see Figure 27):
  - Lip hinge area unless equipped with grease fittings (apply oil to the top of the entire length of lip hinge when platform is at the full below-dock position and lip is folded).
  - Dual-lanyard lever pivot.
  - Platform hinge area (apply oil to top of all platform hinges when platform is at the full below-dock position).
  - Toe guard hinges (along full length of top and bottom hinges).
  - Hoist cylinder-to-platform frame pin.
  - Lip cylinder-to-platform frame pin.
  - Lip lifter and lift cylinder pin.

- Lubricate the following areas with white lithium grease (see Figure 27):
  - Valve lever pivot and top of logic block spool valve.
  - All hoist cylinder trunnions.
  - Toe guard pivots (where toe guard strut contacts pivot).

**Note:** Apply grease to lip hinge grease fittings if equipped.

**NOTICE**

Failure to properly lubricate the dock leveler will cause abnormal operation of the leveler.

**Yearly Maintenance**

- Complete Quarterly Maintenance.

- Change hydraulic oil (may be required more often depending upon conditions).
ADJUSTMENTS

Adjust Main Pressure Relief

⚠️ DANGER
Unless the dock leveler is equipped with a tethered remote, two people are required to engage the maintenance prop: one person to operate the unit, the other person to engage the maintenance prop.

In addition, it is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

⚠️ WARNING
When service under the dock leveler is required, always lock all electrical disconnects in the OFF position after raising the platform and engaging the maintenance prop.

Always post safety warnings and barricade the work area at dock level and ground level to prevent unauthorized use of the dock leveler before maintenance is complete.

A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

Main Pressure Relief Adjustment

Note: The main pressure relief may need to be increased if the platform does not rise or rises slowly and the system operates in pressure relief mode.

The main pressure relief may need to be decreased if the pump motor loads down when platform reaches the full raised position.

See Troubleshooting section on pages 38-41 for more information.

1. Raise the platform fully and engage the maintenance prop in the service position.
2. Turn OFF all electrical power to the dock leveler.
3. Attach lock out/tag out devices.
4. Remove acorn nut (F). See Figure 29.
5. Loosen jam nut (E).
6. Adjust hex adjusting screw (D) as follows:
   • To increase pressure relief, turn hex screw clockwise one full turn.
   • To decrease pressure relief, turn hex screw counterclockwise one full turn.
7. Tighten the jam nut and reinstall the acorn nut.
8. Turn ON electrical power to the dock leveler.
9. Remove lock out/tag out devices.
10. Disengage the maintenance prop.
11. Cycle leveler and verify pressure relief setting.
12. Repeat steps 1–9 as necessary.

Note: If dock leveler is combined with PowerHook vehicle restraint, see PowerHook manual for procedure.
Adjust Cable Weight and Down Speed Control

Cable Weight Adjustment

If the platform lip does not extend, or extends too soon, cable weight (F) may need adjustment. The cable weight is attached to cable (D) and is located underneath the platform, directly behind logic block (B).

The factory setting causes the lip to fully extend when 1 – 3 in. (25.4 – 76.2 mm) of travel is left in the hoist cylinder.

Note: To prevent the cable weight from accidentally falling off the cable when adjusting the weight, attach a locking pliers or similar device to the cable just below the cable weight. If adjustment requires that the weight be moved down, allow sufficient distance between pliers and weight before adjusting.

To adjust the cable weight (see Figure 30):

a. Loosen (do not remove) set screws (G).

b. To make lip extend sooner, slide the weight up.

c. To make lip extend later, slide the weight down.

d. Tighten set screws.

Down Speed Control Adjustment

If the dock leveler does not lower, the down speed control may require adjustment. The adjusting screw (A) is a hex screw located in logic block (B), directly behind the upper front hose connection.

Note: If the platform lowers too fast, the platform will stop lowering and lock in “safety” mode.

Use 1/4 turn increments when adjusting the down speed control. Check platform lowering speed after each adjustment.

To adjust the speed control (see Figure 30):

a. Loosen the jam nut.

b. To decrease the lowering speed, turn adjusting screw (A) clockwise.

c. To increase the lowering speed, turn adjusting screw (A) counterclockwise.

d. Tighten the jam nut.

Note: Extreme cold weather and/or incorrect hydraulic fluid may also cause cylinder to lock. Decrease down speed to compensate.
ADJUSTMENTS

Adjust Auto Return To Dock (ARTD)

![Diagram](image)

**Figure 31**

A— Cable
B— Proximity Switch
C— Bracket
D— Lock Nuts
E— Target
F— Lip Hinge Tube
G— Platform Lip
H— Indicator Light

**Auto Return To Dock (ARTD)**

PR levelers can be equipped with optional Auto Return To Dock (ARTD) if leveler is not interlocked with a transport vehicle restraint.

The ARTD uses a proximity switch (B) located under the platform and a piece of angled steel called the target (E) that is attached to the lip hinge tube (F). See Figure 31.

The proximity switch provides a six-second delay after the platform has lowered to the full below-dock position, after which the platform will return to the cross-traffic position. The switch also contains an indicator light (H) that can be used for diagnosing and adjusting the switch.

**Note:** Some proximity switches have an indicator light at the back of the housing and some have the light at the side of the housing.
Adjust Auto Return To Dock (ARTD, continued)

**NOTICE**

Whenever proximity switch and target are adjusted, check for interference between target and switch before operating the leveler. Damage to switch will occur if the target contacts the switch.

The maximum torque for proximity switch lock nuts is 27 N-m (29 lb-ft). Damage to switch will occur if maximum torque is exceeded.

---

Adjust Auto Return To Dock (ARTD)

1. Raise platform fully and engage the maintenance prop in the service position. Allow platform to rest on the prop so the lip will fully fold until it contacts the lip stops.

2. Turn OFF all electrical power to the leveler and lock out/tag out the electrical power supply.

3. Loosen lock nuts (D). Adjust proximity switch (E) to obtain distance (A). Tighten lock nuts.

4. Bend target (B) as needed to obtain distance (C). Recheck distance (A) and readjust if necessary.

**Note:** At least two people may be required to manually move the lip.

5. After adjusting proximity switch and target, slowly move the lip up by hand while observing the target and proximity switch. The target MUST NOT contact the switch, otherwise, damage to switch will occur. Readjust switch and/or target if necessary, then recheck for interference.

6. Remove lock out/tag out and turn ON electrical power to the leveler.

7. Disengage the maintenance prop.

8. Turn the ARTD switch (on control panel) to the ON position.

9. Raise the platform until the lip is fully extended, then allow the platform to drift to the below-dock position. After approximately 6 seconds, the platform should return to the cross-traffic position.

10. Adjust the proximity switch and target as necessary. Make small adjustments, then operate the dock leveler to check results. Do this until satisfied with the ARTD operation.

**Note:** Use the illustrations on pages 34-35 to assist in fine tuning and/or diagnosing the ARTD operation.

---

**Figure 32**

A— 1/4 in. (6.4 mm) Approximate
B— Target
C— 1 in. (25.4 mm) Approximate
D— Lock Nuts
E— Proximity Switch

**Note:** Distances (A and C) in Figure 32 are typical factory settings. Use these dimensions only as a starting point when adjusting the proximity switch and target, especially if switch and/or target have been replaced.

When dimensions (A and C) are obtained, the proximity switch and target may need finer adjustments to get the ARTD to operate as desired.
Adjust Auto Return To Dock (ARTD, continued)

**Full Below-Dock Position**

Whenever the platform lip is at the full below-dock position, the following conditions will exist for a normally operating ARTD (see Figure 33):

- Target in sensing area of proximity switch.
- Proximity switch ON (closed, signal sent to the control panel).
- Proximity switch indicator light is ON.
- Platform will automatically rise after approximately a six-second delay, then return to the cross-traffic position.

![Figure 33](image)

**Lip Fully Extended Position**

Whenever the platform lip is at the fully extended position, the following conditions will exist for a normally operating ARTD (see Figure 34):

- Target not in the sensing area of proximity switch.
- Proximity switch OFF (open, no signal sent to the control panel).
- Proximity switch indicator light is OFF.
- If the platform lip is resting on the transport vehicle bed, the platform will stay at this position unless the operator activates the leveler.

![Figure 34](image)

**Cross-Traffic/Lip Fully Folded Position**

**Note:** The platform lip is fully folded when the platform is at the cross-traffic position (stored, with lip engaged with keepers) or when platform is resting on the maintenance prop.

Whenever the platform lip is at the cross-traffic or fully folded position, the following conditions will exist for a normally operating ARTD (see Figure 35):

- Target not in the sensing area of proximity switch.
- Proximity switch OFF (open, no signal sent to control panel).
- Proximity switch indicator light is OFF.
- Platform stays at this position unless the operator activates the leveler.

![Figure 35](image)
## TROUBLESHOOTING

### DANGER

Unless the dock leveler is equipped with a tethered remote, two people are required to engage the maintenance prop: one person to operate the unit, the other person to engage the maintenance prop.

In addition, it is recommended and good safety practice to use an additional means to support the dock platform and lip anytime when physically working in front of or under the dock leveler. This additional means may include, but is not limited to a boom truck, fork truck, stabilizing bar or equivalent.

### WARNING

When service under the dock leveler is required, always lock all electrical disconnects in the OFF position after raising the platform and engaging the maintenance prop.

Always post safety warnings and barricade the work area at dock level and ground level to prevent unauthorized use of the dock leveler before maintenance is complete.

A hard hat or other applicable head protection should always be worn when working under or around a dock leveler.

Always stand clear of platform lip when working in front of the dock leveler.

---

Before performing the detailed troubleshooting procedures, check the following items first:

- Check all fuses inside the control panel(s). Replace any blown fuse(s) with a fuse of equal specification.
- Make sure the correct voltages are present at the proper locations inside the control panel(s).

_AR = As Required_

*Provide dock leveler serial number and size of platform when e-mailing, calling or faxing orders.*
Customer Information

NOTE: Refer to Figure 36 for left/right orientation of dock leveler and Figure 37 for example of decal.

The LEVELER model/serial number decal is located on the left platform joist near the front (lip) of dock leveler (A).

When you receive your new equipment, write down the model and serial number in the form provided. This will help ensure safe keeping of the numbers in the event the model/serial number decal (A, B) becomes lost or damaged.

Also, write down Systems, LLC’s order number, the company that installed the dock leveler, and the original owner’s name. This will all help to identify the specific dock leveler if more information is required.

When ordering, use part numbers and description to help identify the item ordered. Do not use “item” numbers. These are only for locating the position of the parts. Always give dock leveler MODEL NUMBER and/or SERIAL NUMBER.

STANDARD PRODUCT WARRANTY

SYSTEMS, LLC warrants that its products will be free from defects in design, materials and workmanship for a period of one (1) year from the date of shipment. All claims for breach of this warranty must be made within 30 days after the defect is or can with reasonable care, be detected. In no event shall any claim be made more than 30 days after this warranty has expired. In order to be entitled to the benefits of this warranty, the product must have been properly installed, maintained and operated in accordance with all manufacturer’s recommendations and/or specified design parameters and not otherwise have been subject to abuse, misuse, misapplication, acts of nature, overloading, unauthorized repair or modification, application in a corrosive environment or lack of maintenance. Periodic lubrication, adjustment and inspection in accordance with all manufacturers’ recommendations are the sole responsibility of the Owner/User.

In the event of a defect, as determined by SYSTEMS LLC, covered by this warranty, SYSTEMS LLC shall remedy such defect by repairing or replacing any defective equipment or parts, bearing the cost for the parts, labor and transportation. This shall be exclusive remedy for all claims whether based on contract, negligence or strict liability.

WARRANTY LIMITATIONS

THE ABOVE WARRANTIES ARE IN LIEU OF ANY OTHER WARRANTIES, WHETHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. SYSTEMS LLC AND ITS SUBSIDIARIES SHALL NOT IN ANY EVENT BE LIABLE TO ANYONE, INCLUDING THIRD PARTIES, FOR INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES OF ANY KIND INCLUDING BUT NOT LIMITED TO, BREACH OF WARRANTY, LOSS OF USE, LOSS OF PROFIT, INTERRUPTION OF BUSINESS OR LOSS OF GOODWILL.

PRODUCT SPECIFIC WARRANTY
“XL” SERIES LEVELER

In addition to the “Standard Product Warranty” provided with all Poweramp® products, Systems LLC, guarantees materials, components and workmanship to be free of defects for the following extended periods:

- Standard Product Warranty – For an additional period of one (1) year, standard product warranty applies.
- Structural Warranty – For an additional period of six (6) years, for parts, labor and freight, this warranty specifically applies to; the deck section, lip section, frame, rear hinge assembly and front hinge assembly only.
- Hydraulic Warranty – For an additional period of six (6) years, for parts, labor and freight, this warranty specifically applies to; the hydraulic pump and motor, all hydraulic cylinders, hydraulic pressure lines and fittings only.
