Automatic Vehicle Restraint

PowerHold® Series

Automatic Re-Store Feature

► Push Button Activation
► iDock™ Controls with Interactive Message Display
► Restraining Force in Excess of 32,000 lbs.
► Non-Impact, Low Profile Design
► Corrosion Resistant Zinc Plated Finish
► Positive Restraining Force Eliminates “Trailer Creep”
► Automatic Re-Store Feature

► Custom PCV Solid State Control
► Amber Light - Caution Indicator
► Bypass/Override Passcode
► Dock Leveler or Door Interlock
► LED Interior and Exterior Lights
► Made in the USA

* PowerHold® shown with self contained pump and motor.
VEHICLE RESTRAINT SYSTEM

The PowerHold® is a non-impact, self-aligning, hydraulic vehicle restraint and is available as a standalone unit or integrated with other loading dock equipment through an optional integrated control panel. The unit helps prevent unexpected trailer departure from the loading dock during the loading/unloading process.

OPERATION

Once a trailer is backed into position against the dock bumpers, the operator presses the “Engage” button, activating the PowerHold to rotate up and seek out the trailer’s Rear Impact Guard (RIG). The restraint then applies continuous pressure to the RIG to securely hold the trailer to the dock. After loading is complete, the operator presses the “Release” button, lowering the PowerHold unit to a safely stored position, releasing the trailer.

SAFETY FEATURES

• Positive hydraulic retention of RIG for zero running room.
• The no shear pin design firmly holds fully loaded or empty trailers after seeking, finding and securing the RIG.
• Amber caution light when restraint is in process of engaging RIG or in override conditions.
• Integrated iDock Controls for safe leveler interlock.
• Full communication package with signage and interior/exterior red/green lights in opposing mode.
• Restraining force in excess of 32,000 lbs.

ADVANCED COMMUNICATION

The PowerHold restraint uses advanced iDock Controls with an LED 3-color light communication system. As a truck approaches, the exterior light is green and the interior light is red. Once the trailer is in position and the PowerHold is activated, the exterior light will change to red, warning the driver not to pull away, and interior light to amber while the restraint is in motion and green once the trailer is secured, allowing the dock attendant to safely enter the trailer. When the trailer is released and the restraint is safely stored, the interior light reverts back to red and the exterior light changes back to green.

If the PowerHold is unable to secure the trailer’s RIG due to abnormal trailer conditions, the restraint will communicate the fault condition by illuminating an amber “Caution” light on the iDock Controls, or by an optional audible alarm. If “By-Pass” of the system is necessary, it is recommended that you secure the trailer by other means before proceeding with the loading/unloading process. In “By-Pass” mode the exterior light is red and the interior light is green, accompanied by the amber caution light indicating to the dock attendant to proceed with caution.
